**EPI ENVIRONMENTAL PRODUCTS CONGRATULATES THE ASSOCIATION OF HELLENIC PLASTICS INDUSTRIES (AHPI) ON ITS ENGLISH LANGUAGE WEBSITE**

Vancouver, Canada - EPI Environmental Products Inc. (“EPI”), the pioneer and leader in oxo-biodegradable plastics (OBP), has taken advertising space on the AHPI’s new English language website.

Arthur Liu, EPI’s marketing manager said, “The AHPI is recognized as a world leader among global plastics industries, and EPI congratulates the AHPI on its new English language website. The English language website should further increase the AHPI’s esteem within the plastics industry.”

EPI, with headquarters in Vancouver, Canada, developed proprietary technology which enables the manufacture of environmentally responsible plastics that degrade after use. EPI’s Totally Degradable Plastic Additives (TDPA™) are incorporated in commodity plastics on standard manufacturing machines to make plastic film and other single use plastic products degradable, without affecting the quality of the product itself. With a primary focus on waste management and single use plastic products, EPI aims to meet its customers’ requirements through excellence in innovation, responsiveness and global capability.
