EPI Environmental Technologies Inc. Expands Distribution Into Vietnam

Vancouver, Canada - September 30, 2010 -- EPI Environmental Technologies Inc. ("EPI"), the global leader of oxo-biodegradable plastic additives, continues to expand global distribution with the addition of distributor, MDI Chemical Co., Ltd. based in Vietnam.

"We recognize biodegradability is a fairly new concept in Vietnam and much like other countries, there is a growing public concern over the pollution of plastic waste," says Franklin Deng, EPI's Business Development Manager for Asia. "Our partnership with MDI represents a universal goal to promote our oxo-biodegradable additive technology as a solution to the plastic waste problem," Deng concludes.

MDI Chemical Co., Ltd. one of the leading chemical distributors in Vietnam, supplies chemicals used for coating, plastics, rubber and metal finishing with a core focus on specialty products including additives and color.

About EPI

Established in 1991 in Vancouver, Canada, EPI Environmental Technologies Inc. ("EPI") has become a world leader in the fight against plastic waste. EPI licenses proprietary technology that causes plastic to degrade. Plastic bags, plastic film, plastic packaging and other single-use plastics can remain in the environment for decades. When these products are manufactured using EPI's additives, they will degrade and subsequently biodegrade when discarded in soil, in the presence of microorganisms, moisture, and oxygen.
